### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

This instant invention is directed towards an unobvious improvement in the fan fastening art. Specifically, the invention calls for a mechanism comprising a fastening frame having a least one divider for dividing the internal space of the frame into compartments that have opposing openings at the front and rear walls, and a plurality of first fastening members each disposed inside the compartment to be abutted on and perpendicular to the divider. The mechanism also comprises a plurality of second fastening members disposed on the housing of a server and being adapted to correspond to the first fastening members so that the first and second members are capable of securing together by snapping the second members into positioning grooves of the first members.

Prior art references such as US Patents 6,556,437 to Hardin, 6,288,897 to Fritschle et al., 6,674,641 to Jensen et al. and 6,795,314 Arbogast et al. disclose mechanisms for fastening fans to a server. In addition US Patent Application Publication 2004/0130872 to Craven et al. discloses a removable fan bay similar to the claimed device. In all of the above stated devices a plurality of fans is mounted in a removable frame that has a fastening mechanism for connecting the frame to the computer. What is not taught or disclosed is the fastening members on the frame being disposed inside the compartment of the frame perpendicular to the divider or the fastening members on the computer being positioned to correspond with fastening members disposed in such a position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
